

CONTINUOUS EFFICIENCY FOR CORRUGATED BOARD PRODUCTION

Our Specialty Tapes for All Process and Design Requirements

Full-range solution provider

Our decades of experience as one of the world's leading manufacturers of self-adhesive tape have not only resulted in a comprehensive product assortment; we at tesa also focus very much on our customers' processes and we constantly strive to understand and solve process needs. Of particular importance to the corrugator industry is not only our dedicated team of tape experts, but also our support when it comes to in-line applicator solutions.

And that is what makes us "great to work with".

Splicing

To splice different paper grades of liner and flute, we offer a comprehensive assortment of double-sided splicing tapes. All ensure a fast splice preparation and offer high tack for secure splicing as well as heat and shear resistance for a stable corrugated production process. Special adhesive formulas and high coating weights ensure highest performance and secure bonds, even on rough and demanding surfaces.

Applied in-line at the "dry end" of your corrugator production line, our self-adhesive specialty tapes for closing, opening, and reinforcing boxes offer highest production efficiency and process security, even at high production speeds.

Closing

Secure closing of corrugated boxes is a matter of transport safety and premium appearance. Our assortment of double-sided tape combines well-balanced adhesion properties with different types of tape backings and liner materials, so you can always find the perfect solution to your specific application and in-line process needs.

Opening

Increase user-friendliness and therefore customer satisfaction by adding our self-adhesive "tear tapes" to your corrugated packaging. Tapes can be applied in-line during production and offer excellent adhesion properties as well as reliable performance during the opening of different grades of corrugated boxes.

Reinforcing

Add extra strength to your packaging solution when needed with our assortment of reinforcement tapes. So while reducing board thickness and weight, you can still increase maximum load and support critical areas like die-cut handles or hand holes.

Postprint plate mounting

We know, of course, that in your corrugator plant you normally receive your printing plates ready for printing, and in most cases you do not do the actual plate mounting (using self-adhesive tape) yourself. However, when printing directly on corrugated board, reliable tape performance is essential and the correct choice of components should not be underestimated.

If you have any needs regarding self-adhesive products for the printing of corrugated board, please get in touch with your tesa representative as your local contact of our worldwide team of Flexo printing specialists.

Complementary products

Besides all of the above-mentioned main self-adhesive tape applications in corrugated board production, we also offer a large assortment of complementary products. Our dedicated sales team will assist in choosing the most suitable tape for your process needs, whether it is for roller wrapping to provide extra "grip", for failure flagging, end tabbing, or general purpose tape applications, to only name a few.

Process Improvement in Every Roll

Splicing

Product	Adhesion to paper	Temperature resistance	Liner	Total thickness [μm]	Backing	Adhesive
